Appl. No. N/A

Amdt. Dated July 23, 2003

Preliminary Amendment

This listing of claims will replace all prior versions, and listings,

of claims in the application:

Listing of Claims:

Claims 1-3 (cancelled).

Claim 4 (original): A magnetron drive power supply comprising a commercial power supply, a high-

frequency inverter for converting electric power of the commercial power supply into high-frequency power

and supplying the high-frequency power to a high-voltage transformer, a high-voltage rectification circuit

and a magnetron being connected to secondary output of the high-voltage transformer, input current

detector which detects a current value of the high-frequency inverter, and controller for controlling the high-

frequency inverter, characterized in that if the detection value of the input current detector has a

predetermined difference from a target value continuously for a given time, the controller stops the high-

frequency inverter.

Claim 5 (original): The magnetron drive power supply as claimed in claim 4 wherein the

predetermined difference between the detection value of the input current detector and the target value is

set in response to the target value.
